

RESULTS

*Microsoft Dynamics GP
Advanced Management*

Realize your business vision with confidence

Microsoft Dynamics

“Our assets have grown to nearly \$1.8 billion. Yet headcount in the accounting department has remained the same. Microsoft Dynamics GP allows us to grow without adding new positions.”

*– Elizabeth Chege
Controller
Addison Avenue Federal Credit Union*

INNOVATE

People drive business success

It's your people who drive results, regardless of your industry or the size of your organization. Growth and success depend on providing everyone in your business—the CEO, management and teams, individuals—with ready access to the systems, information, and tools they need to work at peak performance.

But you know that. And we know it, because we've worked directly with our customers to design Microsoft Dynamics® GP Advanced Management, a solution that bridges the gap between business process automation and the way people really work.

Microsoft Dynamics GP Advanced Management equips people at all levels of your organization to keep pace with the competition and manage changing markets, unique requirements, and the full range of business operations.

Built to work like and with the 2007 Microsoft® Office System and Microsoft technologies, this mature, flexible solution offers proven success, deep functionality, and continuing innovation. You can fuel productivity from the start—and help maximize your investment in a unified Microsoft platform and industry-leading customization tools.

Rich capabilities automate and connect the full range of your business operations. You'll have the power to meet demanding, industry-specific requirements, collaborate and communicate through Web portals, and transform data with reporting and business intelligence tools that reach all your people, whether they're working in Microsoft Dynamics GP or other applications.

Just as important, your solution can grow with you into the future. You can add unlimited users and enhance your solution with capabilities designed to meet the most complex business needs. At all times you'll be backed by a community of local certified partners, all dedicated to helping you take advantage of a solution that frees your people to focus on business performance, rather than the systems that make your business run.

Move forward with confidence.

“While the processes were new, the skills were not. Everyone in the department knew how to use Outlook and Excel so training on Microsoft Dynamics GP was minimal and completed quickly.”

– Elizabeth Chege
Controller
Addison Avenue Federal Credit Union

A solution that's familiar to your people

Do you want a business application that your people already know how to use? Our user interface has the look and feel of the Microsoft Office System, so whether employees are working in Microsoft Dynamics GP or the Microsoft Office System, they'll feel at home. The Microsoft Dynamics RoleTailored... interface intuitive task panes can help them focus on their key responsibilities, rather than on chasing information and juggling applications. Equally important, Microsoft Dynamics GP frees people to make the most of the applications they use every day.

Give employees fast access to relevant information and tools with the Role Center, a home page tailored to real jobs within your company. You can work out of the box with more than 20 role centers that span Sales Manager to Accounts Payable Clerk to IT Developer, and then further personalize the home page to meet individual needs.

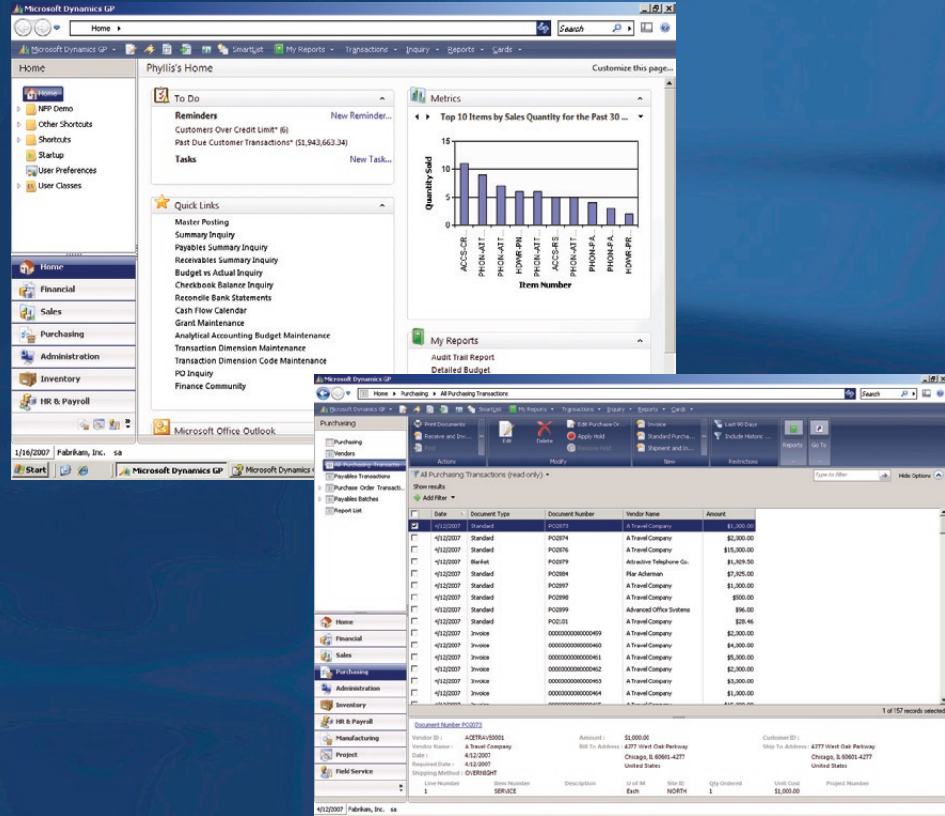

Simplify the tasks people perform every day. Microsoft Dynamics GP helps people perform tasks quickly and intuitively with the Action Pane, an intuitive command bar that appears across all navigation lists. Inspired by the 2007 Microsoft Office System, Action Panes make it easy for people to sort and filter records and perform multiple tasks from within a single window.

Help eliminate the need to juggle applications and save valuable time with Smart Tags that enable quick access to Microsoft Dynamics GP data from Office applications, including access to customer, vendor, inventory, general ledger account, and employee information.

Smooth integration with the Microsoft Office System makes it easy for people to analyze information in Microsoft Office Excel®, populate Office Word form letters and other documents with up-to-date information from Microsoft Dynamics GP, and send customer statements and invoices through Office Outlook®.

The Role Center delivers a personalized home page that enables people to work with the information and tasks most relevant to their jobs.

Empower people to work faster and smarter with Action Panes, an intuitive, graphical command bars that appear across navigation lists.

SIMPLIFY

“In the long run, using the same products and technologies makes it easier for AirTran IT specialists, and makes the entire company run more cost effectively since we’ve become a Microsoft one-stop shop.”

– Kim Meredith
IT Program Manager
AirTran Airway

Fits with your existing Microsoft systems

You want your people to focus on your business, not your IT systems—that’s why we designed Microsoft Dynamics GP to work with Microsoft products and technologies. You can adapt your system to meet changing business needs at minimal cost. Your IT staff will be instantly familiar with business software built on your existing Microsoft infrastructure.

Microsoft Dynamics GP provides the foundation and flexibility that help ensure smooth deployments, server-side updates, and efficient, cost-effective integrations and customizations. In line with our mission to deliver people-ready solutions, our security model is tailored to roles and tasks, enabling better auditing and reporting and simplifying administration.

Bring together information across systems and applications. Using the tool that works best for you—Microsoft BizTalk® Server, eConnect, or Web services—you’ll have the ability to integrate data from virtually any source, connecting people with the information they need to make decisions and drive growth.

Extend the reach of business applications, information and processes to employees, customers, and partners through Windows® SharePoint® Services. Step up to Microsoft Office SharePoint Server 2007 and gain search and collaborative networking capabilities that empower people to find and use Microsoft Dynamics GP information and business information stored in other systems.

If your organization works with multiple, industry-specific systems, our Certified Independent Software Vendor (ISV) community offers integrations that integrate information, reduce data entry, and deliver deep visibility across front-office and back-office solutions. Examples include integrations for customer relationship management, retail, and warehouse management systems; mobile devices; and solutions such as Microsoft Office PerformancePoint™ Server 2007.

Scale to meet changing needs with a solution built for growth. Powered by Microsoft SQL Server® and Windows Server®, Microsoft Dynamics GP has proven scalable in customer environments from a single desktop PC to more than 1,000 workstations. Virtualization capabilities help eliminate the need to install applications on each user’s desktop.

Individual users and administrators can personalize the solution by adding new windows and fields themselves. Developers can also extend the solution further using industry-standard tools. Without the need to touch Microsoft Dynamics GP code, developers can modify the solution to meet unique business or industry requirements, or choose from hundreds of ISV add-on products.

INTEGRATED

STREAMLINE

“The end-to-end integration automates tasks that were once manual. Employees no longer have to re-enter information from online orders into the system each evening. That information is automatically captured. The new system has lessened labor and increased efficiency across the board.”

– Denny Dunn
Director of Operations
Laser Pros International

Fuels your business productivity

Do you want a solution that fits with the way people actually work? Microsoft Dynamics GP is designed to help employees, partners, and customers get more done, faster, with connected information and processes. Our goal is to fit real-world business processes and fuel the teamwork that can take your business forward.

Along with a solution that people will want to use, Microsoft Dynamics GP offers mature, proven functionality that automates and integrates financial management and business operations—including distribution, manufacturing, field service, and project management. By helping ensure all your business processes work together, you can increase efficiency and performance, deliver superior customer service, and improve relationships with partners and suppliers.

Take advantage of Web-based capabilities to improve agility and build employee, customer, and partner satisfaction. For example, you can reduce paperwork and data re-entry, and help managers work more effectively, by allowing staff to take a wide range of tasks online—from routine timesheets to complex purchase requisitions. People across the organization can work from remote locations with portal-based access to information and applications. Equally important, customers and partners can quickly access relevant information through security-enhanced extranets.

Drive efficiency and accuracy with flexible workflow processes that are built on the Windows Workflow Foundation in Office SharePoint Server 2007. Automate key business tasks, including notifications and approval routings for purchase orders, sales quotes, financial series batches, and sales credit limit overrides. And with Office SharePoint Server 2007, you can extend workflows to processes outside of the Dynamics GP system.

Monitor business processes and information to prevent fraud and maintain tight control. Simplify reporting compliance with Sarbanes-Oxley requirements by automating sign-offs in an auditable, traceable manner. Maintain checks and balances with automated processes and clear separation of roles and tasks.

Specific industry requirements? No problem. Our authorized resellers and ISVs provide industry specific extensions to complement the unique requirements of worldwide industries—from complex manufacturers and wholesale distributors to state and local governments, not-for-profit organizations, the healthcare industry, and more.

“We have a clearer picture of our operations across the board because Microsoft Dynamics GP provides superior access to the data. It’s a huge benefit for us at corporate headquarters.”

– Clarence White
Chief Information Officer
Salvation Army

Enables confident decision making

Without the right information, your people can’t make informed, accurate decisions. That’s why we’ve designed a solution that provides business information in contexts that make sense for individuals. Your total solution delivers insight that reaches everyone in your organization, whether they’re working in Microsoft Dynamics GP or other applications.

Provide access to real-time data that can easily be analyzed in familiar tools such as Office Excel, the reporting tool people use every day, with no need to log into Microsoft Dynamics GP. Decision makers at all levels can work with Office Excel to access and analyze relevant data and transform that data into decision-driving information, including refreshable, presentation-quality reports.

Proactively manage changing business conditions. Equipped with personalized, real-time business alerts and list-based inquiries, work teams and management stay current and informed about changes such as stock shortages, large balances past due, or budget overages.

Improve planning with drill-down, inquiry, and reporting tools for operations, revenues and spending, and sales trends. Your solution also includes pre-defined SQL Reporting Services reports. People can easily modify these reports or quickly build new ones to meet specific needs.

Store reports for local and remote access and viewing on Office SharePoint Server 2007 or on a network or desktop repository. When you deploy Microsoft Dynamics GP with Office SharePoint Server 2007, you’ll enable people to search and retrieve data from across all your systems—including reports, Microsoft Dynamics GP data, and documents in multiple formats and e-mail messages.

Publish reports at the right time, for the right people, with flexible scheduling and delivery options. Microsoft Dynamics GP also offers personalized report navigation for the reporting options people use most often. Users can select every type of report from the Microsoft Dynamics GP Report List—including SQL Server Reporting Services and Office Excel reports—customize them as needed, and then store them for one-click access, whether they’re working in the system or in another application.

Centralize budget management, control budgeting processes, and create accurate projections with Microsoft Forecaster. Report on budget forecasts and actuals, and track historical planning changes with the ability to lock down specific forecasting areas.

Meet advanced requirements for analytics, scorecards, and planning. Microsoft Dynamics GP provides an extended integration to Office PerformancePoint Server, a comprehensive, flexible business intelligence solution. You can create strategic plans, sales forecasts, cost allocations, and budgets that work for everyone in your organization, and then reuse critical plans on an ongoing basis.

INSIGHT

Microsoft Dynamics GP Advanced Management

Take hold of a broad-based, flexible solution designed with you in mind. Business Ready Licensing offers a comprehensive set of functionality at a simple user-based price. Additional functionality is available for purchase to accommodate your unique business requirements. Contact an authorized reseller for specific pricing and availability in your area.

FINANCIAL MANAGEMENT

General Ledger with AFA	Maintain all of your financial journal entries and budgets with a double-entry accounting ledger.
Analytical Accounting	Analyze financial data by whatever criteria you require for greater reporting flexibility and extensibility. Track financial data by different dimensions, such as region or profit center, without adding to your chart of accounts.
Fixed Asset Management	Improve financial control and put company assets to the best possible use with tools for tracking, analyzing, and manipulating fixed assets.
Intercompany Processing	Set up and maintain relationships so that revenues or expenses incurred in one company can be tracked as "due to" or "due from" amounts in other companies.
Multicurrency Management	Process transactions in multiple currencies including invoices, checks, statements, packing slips, and much more.
eExpense *	Streamline expense processes and eliminate paper receipts. Through a hosting provider, eExpense enables employees to submit expense reports in an online environment, using simple checklists and templates with pre-populated data.
Audit Trails *	Verify the accuracy of financial statements and help ensure regulatory compliance with tools for capturing, archiving, and tracking data and transactions from their original point of entry in the accounting system.
Electronic Signatures *	Set up preventative authorization controls that can be activated at any place in the system where data is changed.
Encumbrance Management	Locate and track budget information, query current or historical encumbrances, and streamline period-end and year-end reporting processes.
Grant Management	Not-for-profit and public sector organizations can automate grant management processes to track funds more easily, demonstrate accountability, and help attract future funding.
Account Level Security	Enhance security and account views by allowing users to enter, edit, and view information from a reduced account set, based on the access granted for General Ledger accounts on a per-user basis.
Bank Reconciliation	Reconcile from your checkbook ledger to the bank's records through a single, automated process. Two versions are available for international needs.
Cash Flow Management	Customizable views and forecasting tools enable you to control, predict, and monitor inflows and outflows.
Payables Management	Automate routine and complex Accounts Payable tasks with real-time statistical history, easy reconciliation, account control, payment scheduling, and tracking.
Receivables Management	Control your accounts receivable with automated processes for invoices, receipts, finance charges, and statements, including the ability to analyze customer activity.
Customer/Vendor Consolidations	Quickly transfer information between Receivables Management and Payables Management to create a customer record that uses information already available in a vendor record, and vice versa.

*Separate Purchase

FINANCIAL MANAGEMENT

Refund Checks	Print refund checks for customers with credit balances, automatically debiting the customer and updating the ledger.
Collections Management	Minimize collections workload, improve your cash flow, and reduce bad debt expense with customizable information views and automated bad debt management tools.
Electronic Document Delivery *	Organize and schedule the e-mail message delivery of invoices, credit memos, and other sales documents to your customers in XML, HTML, Office Excel, or PDF formats.
Electronic Bank Management	Streamline set-up, entry, maintenance, and reconciliation for all transactions that appear on your bank statement—including payments to creditors, cash receipts from debtors, and bank charges.
Electronic Funds Transfer from Payables Management	Securely transfer payments by transmitting your payables to the bank after you've processed them.
Electronic Funds Transfer from Receivables Management	Transfer sales batches with associated payments and automatically generate an electronic file for banking transfers.
Lockbox Processing	Automatically import and apply customer payment information from a lockbox transaction file provided by your bank. Lockbox Processing provides reliable receivables information, improved funds availability, and greater fraud protection.
Safe Pay	Safe Pay generates an electronic file of authorized checks and voids to the bank, enabling banks to confirm the authenticity of a check number and amount before payment.
Revenue/Expense Deferrals	Simplify deferring revenues or distributing expenses with the ability to make entries for future periods within General Ledger, Receivables Management, Payables Management, Sales Order Processing, Purchase Order Processing, and Invoicing.
Workflow	Combine Microsoft Dynamics GP with Office SharePoint Server 2007 to create document and batch approval workflows, including multiple approvers and levels of approval, delegation, and escalations.

**Separate Purchase*

BUSINESS INTELLIGENCE AND REPORTING

Office Smart Tags	View Microsoft Dynamics GP data from Office Word, Office Excel, and Office Outlook. For example, you can drill into information stored within Microsoft Dynamics GP from an Office Outlook email.
Reminders	Receive automatic reminders, personalized to your specific needs, when conditions change.
SmartLists SmartList Builder*	Microsoft Dynamics GP users can gain quick access to vital information with more than 200 built-in SmartLists. They can also use SmartList Builder to create personalized SmartLists and Office Excel Reports.
Office Excel-Based Reports	Create refreshable graphs and reports with Office Excel for real-time data access.
Analysis Cubes and Analysis Cubes Library	Produce analytical views of key business metrics through automated report building and OLAP queries. Take full advantage of SQL Server to enable people to analyze updated, integrated information from multiple angles and formats.

BUSINESS INTELLIGENCE AND REPORTING

SQL Server Reporting Services Reports	Reduce the time it takes to create reports—and take full advantage of your data—with customizable SQL Reporting Services reports.
Report Writer	Work easily with a built-in reporting tool to modify more than 400 Microsoft Dynamics GP reports, or create new reports.
Microsoft FRx®	Gain control of your financial reporting process. This robust reporting tool gives you comprehensive, boardroom-quality, customizable reports that are easy to create, distribute, and use. Advanced capabilities let you drill down into transaction detail and translate statements into multiple currencies. One named user license included; additional available at extra cost.
FRx Report Manager	Organize multiple financial documents in a single-file, presentation-quality report book.
FRx Report Server	Run more reports quickly by automating the production of reports in a scalable, high-speed reporting environment. One report engine included; additional engines available at extra cost.
FRx WebPort	Publish, store, and manage Microsoft FRx reports and other relevant documents on a security-enhanced Web site. One named user license included; additional licenses available at extra cost.
FRx Report Launcher*	Select pre-existing reports, specify output options, and generate the reports you need, all on an on-demand basis, with the ability to drill down to transaction detail level while maintaining the original report design.
Crystal Reports Professional*	Transform Microsoft Dynamics GP data into presentation-quality information with Crystal Reports Professional, an industry standard reporting tool. One named user license included; additional licenses available at extra cost.
Microsoft Forecaster	Forecast accurate budgets and gain control of the entire budgeting and planning process. Coordinate plans dynamically and collaborate easily with your management team. One named user license included; additional licenses available at extra cost.
Solution Accelerator for Compliance Management*	Effectively manage internal financial controls to help meet compliance objectives for your organization.

**Separate Purchase*

SUPPLY CHAIN MANAGEMENT

Sales Order Processing with Advanced Invoicing	Automate the sales ordering process to improve customer service, control fulfillment and invoicing, and minimize shipping and labor costs.
Extended Pricing *	Create flexible pricing options and rules for customers, including standard and personalized percentage-off, value-off, and net pricing options. Implement date-sensitive functionality for sales and promotions.
Order Management (Runs on Business Portal)	Give salespeople and customers security-enhanced access to online information that allows them to place and update orders via an out-of-the-box, business-to-business portal.
Inventory Management	Monitor inventory stock levels and costs and set prices on a customer-by-customer basis to stay competitive, speed fulfillment, and build loyalty.
Bill of Materials	Increase productivity with fast, flexible tracking of components and subassemblies used in light manufacturing and similar production and assembly operations.

“We have gained not only a complete financial management system but a complete vision for where we’re going.”

– Sharaky Abdul Azim
Chief Financial Officer
Arabian Oud

SUPPLY CHAIN MANAGEMENT

Advanced Distribution*	Smoothly tailor distribution to control speed, accuracy, and costs; for example, create user-defined sales fulfillment process flows, define process holds, and ensure that all drop-ship line items meet requirements.
Advanced Picking *	Help improve visibility, reduce overhead, and increase accuracy for tailored picking routines that meet each site’s business requirements, bin sequence, or method of operation.
Available to Promise	Help ensure the right inventory is available at the right time to meet customer needs, make firm delivery promises, and boost profitability.
Purchase Order Processing	Manage commitments and build lasting vendor relationships with automated purchasing and approval processes, flexible extended pricing, and blanket purchase orders.
Landed Cost	Track and update the true cost associated with an inventory item and then automatically assign or modify costs as items are received.
PO Generator	Automate purchasing by generating a suggested purchase order, with order point or minimum/maximum settings that determine quantities needed based on purchasing, sales, and inventory data.
Requisition Management (Runs on Business Portal)	Help increase productivity and reduce paperwork by enabling employees to enter purchase requisitions online for manager approval and transfer to Purchase Order Processing.
Returns Management	Generate RMAs from historical customer invoices, service calls, or manually; generate RTVs or depot work orders; and automatically transfer items from the returns warehouse to the main warehouse.

*Separate Purchase

MANUFACTURING

Manufacturing Bill of Materials	Build better, more flexible bills of materials to maximize your production efficiency including engineering, manufacturing, configured, archived and even super bills that manage all options on the configurable products you produce.
Manufacturing Order Processing	Efficiently track and manage the entire cycle of order processing, including detailed production costs, work orders, routings, outsourcing, and work center definitions.
Master Production Scheduling	Gather information from sales forecasts to form a single, comprehensive production schedule and automatically create manufacturing orders.
Material Requirements Planning	Ensure proactive planning, smart procurement decisions, and precise adjustments to production with flexible planning and analysis capabilities in addition to viewing material requirements and vendor information,
Capacity Requirements Planning *	Establish and measure overall work capacity, as well as compare established capacity—defined through work center calendars, employee, and machine efficiencies—with the amount of work you want done, defined through routing times, manufacturing order requirements, and other specifications.
Engineering Change Management *	Control changes made to items and bill of materials with sign-off controls for greater organization and communication.

MANUFACTURING

Job Costing*	Deliver a view of production profitability by capturing all costs related to a job when they occur and consolidating them within a central location that's easy to access and manage.
Quality Assurance*	Design testing procedures of incoming materials, helping ensure that you start with the quality of raw materials you require and reduce manufacturing delays, rework, and scrap.
Sales Configurator*	Efficiently incorporate information from various modules—including Inventory Control, Bill of Materials, Routings, and Sales Order Processing—and generate manufacturing orders for the configured items.
Sales Forecasting *	Effectively collaborate between operations and sales, aggregate demand and create precise, forward-looking projections by leveraging the power of Materials Requirements Planning.

**Separate Purchase*

PROJECT MANAGEMENT

Project Accounting	Maintain tight control over project direction, costs, execution, and budget; support resources effectively; and ensure accurate billing and accounting through tight integration with financials, inventory, and accounts receivable.
Project Time and Expense (Runs on Business Portal)	Capture, review, and approve project time sheets and expense reports through the Web, enabling prompt, accurate customer invoicing and efficient reimbursement for out-of-pocket employee expenses.

SERVICE MANAGEMENT—FIELD SERVICE

Service Call Management *	Efficiently enter customer service requests; dispatch technicians; manage parts, labor, and miscellaneous charges; bill customers for time and material services and consolidate service call billings.
Contract Administration	Extend the services you provide to your customers with contracts for support, maintenance, and repairs. Improve services through automated billing, flexible contract administration and maintenance, profitability tracking, and item history from inception to retire.
Preventive Maintenance*	Track customers service needs for scheduled proactive maintenance and forecast purchasing and scheduling requirements. Coordinate open service requests with upcoming preventive maintenance calls.
Depot Management*	Repair items sold to customers with workstation controls to manage the process, provide billing, and update the contract.
Field Service Anywhere *	Empower technicians to keep track of service calls while working in the field, using mobile devices and laptop PCs to log, receive, prioritize, and respond to service calls—with the assurance of automatic data synchronization with Microsoft Dynamics GP.
Field Service Suite for Business Portal*	Using the power of Office SharePoint Server 2007, give customers secure access to online information that allows them to enter service calls and returns, as well as check meter readings with just an internet connection.

**Separate Purchase*

HUMAN RESOURCE MANAGEMENT*

Payroll – US	Automate payroll processing, equip staff to handle complex payroll requirements, and offer better service to your employees while reducing necessary overhead costs.
Advanced Payroll	Extend Payroll capabilities with Pay Policy Manager, Labor Accrual Manager, Advanced Labor Reporting, and Payroll Hours to General Ledger functionality.
Federal Magnetic Media	Help maintain full compliance with government reporting requirements by generating Federal Magnetic Media files.
Payroll Connect	Automate data transfer from ADP/PC Payroll for Windows into General Ledger, using a turnkey solution that eliminates the need to re-enter data.
Payroll Direct Deposit*	Add payroll funds to employees' bank, savings and loan, or credit union accounts through an automated clearing house (ACH) file.
Human Resources	Attract and retain top talent and offer employees better services with customizable hiring processes, scheduling, pay rates, and performance evaluation tools.
Advanced Human Resources	Extend Human Resources with Benefit Lifecycle Manager, Certification, License and Training Manager, and Employee Health and Wellness functionality.
PTO Manager	Manage complex and changing vacation and sick time policies quickly and accurately with an automated process.
HRM Self Service Suite for Business Portal (Employee Pay, Profiles, Recruitment, Skills & Training, and Time & Attendance)	Reduce paperwork and avoid double entry by enabling employees to view and update personal information from a Web browser.
Benefit Self Service for Business Portal	Reduce paperwork and manual entry with moving benefit processes online, including yearly benefits, change of status, and more.

*Separate Purchase

COLLABORATIVE WORKSPACE

Business Portal	Empower employees with security-enhanced access to Microsoft Dynamics GP applications, information, and processes through a single, Web-based portal.
Windows SharePoint Services	Enable users to locate information quickly and efficiently, as well as work with others more productively in an online environment. This product is included with Windows Server® and is the platform for Business Portal.
Microsoft Office SharePoint Server 2007 *	Built on the Windows SharePoint Services foundation, Office SharePoint Server 2007 offers advanced capabilities for centralizing, organizing, aggregating, and sharing information. A wide range of collaboration features include integration with Microsoft Office System applications and specialized document-specific libraries, such as the Office PowerPoint slide library.
Dynamics Client for Office *	This affordable bundle of modules is sold on a named user basis and includes Business Portal, FRx WebPort, HR Benefit Self Service, and FRx DrillDown Viewer™. Options for Windows SharePoint Services and Office SharePoint Server 2007 are also available.

*Separate Purchase

“One of my favorite aspects of heading Olympia Chemicals is the opportunity I have to help my employees perform better. I chose Microsoft technologies for that reason.”

– Mustafa Monnoo
Chief Executive Officer
Olympia Chemicals

CONFIGURATION AND DEVELOPMENT

Security Management	Manage user security by roles and tasks effectively with straightforward configuration windows and broad audit reporting processes.
Field Level Security	Control access to data throughout Microsoft Dynamics GP by managing security restrictions on individual data fields, windows, and forms.
Process Server	Improve system performance by offloading and distributing processor-intensive tasks to idle, under-utilized, or dedicated process servers and freeing up personal computer resources. Automate load balancing to efficiently utilize system resources.
Integration Manager—Conversions	Migrate data to Microsoft Dynamics GP using this integration tool during your implementation (available for use for 240 days following purchase).
Integration Manager—Distribution*	Import data from other systems on a one-time or continuous basis into Purchase Order Processing, Sales Order Processing, and Inventory modules.
Integration Manager—Financials, Payroll, and Project Management *	Import data from other systems on a one-time or continuous basis into Financial Management, Payroll, and Project Management modules.
Extender*	Personalize your system without a developer’s expertise by easily creating additional windows, notes, macros, and more for storing and displaying additional information.
Modifier with Visual Basic for Applications*	Modify the appearance and functionality of any Microsoft Dynamics GP or Dexterity-based third-party window, add new fields, change global resources to affect the entire application, and attach VBA code for less complex business logic.
Developer Toolkit (Visual Studio Tools, eConnect, and Web Services)*	Connect external applications and extend and personalize Microsoft Dynamics GP with Visual Studio Tools, Web Services, and eConnect, which provides an industry standard .NET and composite application development platform and connectivity to Microsoft Dynamics GP.
Software Development Kit	Comprehensive documentation provides an outline of the Microsoft Dynamics GP data model including development examples that give developers a map For creating customizations and integrations. Table designs, transaction flows, database diagrams, and version change documents are included.
Country -Specific Functionality	For some regions, additional features are available to meet country-specific legal requirements.
Additional Languages *	Microsoft Dynamics GP is available in International English, US English, French-Canadian, and Latin American Spanish languages.

*Separate Purchase

Software for Today and Tomorrow

CHOOSE THE SOLUTION THAT FITS YOUR NEEDS WITH BUSINESS READY LICENSING

Get the right solution, at the right time, at the right price. With Business-Ready licensing, you can choose from two editions—Business Essentials and Advanced Management—as well as from add-on components. By offering straightforward purchasing and upgrade options, Business Ready licensing helps save time, reduce unnecessary costs, and free you to add capabilities when the time is right. This simplified approach and predictable path for growing your solution helps protect your investment and minimize disruption to your business when you upgrade your system—helping to ensure a low total cost of ownership.

HELP SECURE CONTINUING VALUE WITH THE BUSINESS READY ENHANCEMENT PLAN

Available worldwide to Microsoft Dynamics GP customers, the Business Ready Enhancement Plan ensures smooth upgrades, updates, and maintenance support that help you stay current with the latest technologies and compliant with regulatory changes. The plan includes all upgrades, service pack updates, and Regulatory/Tax updates, along with investment protection, lifecycle support, and much more. Equally important, you can reduce training costs, get more out of your solution, and increase productivity with CustomerSource, a self-service portal that offers unlimited online training, a Knowledge Base, downloads and updates, and newsgroups.

WORK CLOSELY WITH A PARTNER WHO UNDERSTANDS YOUR BUSINESS

Tap into the global network of Microsoft Certified Partners with the industry and technical expertise to help you adapt a Microsoft

Dynamics GP solution to fit your specific type of business. Your local Microsoft Certified Partner can provide expert support for implementing your Microsoft Dynamics GP solution and help your company benefit from a rich ecosystem of offerings. They can help you meet specialized needs across a wide range of industries and make it easy for you to conduct business without boundaries.

ENSURE EFFICIENT, PREDICTABLE IMPLEMENTATIONS WITH MICROSOFT SURE STEP

Get your solution up and running quickly with Microsoft Dynamics Sure Step, a straightforward methodology that includes tools and services designed to ensure reliable implementation, migration, and upgrades. Working together, you and your Microsoft partner can take advantage of a proven approach that works across the world to help speed time to deployment and minimize risks and costs—whether you're deploying Microsoft Dynamics GP at a single location or across multiple sites and regions.

MAXIMIZE YOUR INVESTMENT OPPORTUNITY WITH MICROSOFT FINANCING

Whether you need software or a more comprehensive package that includes services and hardware, Microsoft Financing and finance solutions partners help make technology affordable. By financing your IT solutions and spreading payments in predictable installments, Microsoft and your partner can help you acquire the solutions you need now and free up your corporate credit lines for other investments.

*You've built the business you want.
Now take your vision further.*

Microsoft Dynamics is a line of business management solutions that automate business processes and help improve financial, customer relationship, and supply chain management.

Delivered through a network of Microsoft partners, these integrated, adaptable solutions work like and with familiar Microsoft software to streamline processes across an entire business.

For more information on Microsoft Dynamics GP Advanced Management, contact an authorized reseller, visit www.microsoft.com/dynamics/gp, or email gpinfo@microsoft.com.
